

STATE OF SOUTH CAROLINA BEFORE THE PUBLIC SERVICE COMMISSION

Docket No. 2001-411-E

In Re: Application of Greenville County For Certificate of Environmental Compatibility and Public Convenience
and Necessity

Rebuttal Testimony of Thomas W. Devine

 Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS. A. My name is Thomas W. Devine, P.E., QEP. My business address is 880 South Pleasantburg Drive, Suite 4D, Greenville, South Carolina 29607. Q. WHAT IS YOUR PROFESSION AND BY WHOM ARE YOU EMPLOYED? A. I am a registered professional engineer in the State of Massachusetts. I am also a Qualified Environmental Professional, which is an international professional registration. I am a principal in Kestrel Management Services, LLC, a professional consulting practice focusing on environmentally driven management issues. Q. PLEASE SUMMARIZE YOUR EDUCATIONAL AND PROFESSIONAL EXPERIENCE. A. I earned a B.S. in Civil Engineering from Northeastern University in 1964, and an M.S. in Environmental Engineering from Harvard, Tufts and Northeastern University in 1972. I served in various management positions 	and Necessity

1		at the United States Environmental Protection Agency, including as Chief
2		of the Air Branch for EPA Region I, Director of the Air and Waste
3		Management Division for EPA Region IV, and Director of the Office of
4		Program Management and Technology, Office of Solid Waste and
5		Emergency Response at EPA headquarters. I have been a consultant in
6		private practice since 1988. A copy of my resume is attached as an exhibit.
7	Q.	ON WHOSE BEHALF ARE YOU APPEARING?
8	Α.	I am appearing on behalf of Greenville County Power, LLC.
9	Q.	WHAT IS THE PURPOSE OF YOUR TESTIMONY?
10	A.	The purpose of my testimony is to provide support for the approval of
11		GCP's application to the Public Service Commission for a Certificate of
12		Environmental Compatibility and Public Convenience and Necessity to
13		Construct a generating plant for the production of electric power in
14		Greenville County.
15	Q.	WHAT DOCUMENTS HAVE YOU REVIEWED IN PREPARATION
16		FOR YOUR TESTIMONY?
17	A.	(1) Greenville County Power's application to the PSC.
18		(2) Exhibit B, Project Description in support of that application.
19		(3) PSD Permit Application for the Greenville Power Project.
20		 Related Class I Air Quality Analysis
21	·	- Related Class II Air Quality Analysis
22		(4) Direct testimony of Chip Olsen, V.P. Development, Cogentrix

1		(5) Direct Testimony of Richard C. Neff, PE, Manager,
2		Environmental Affairs, Cogentrix.
3		(6) Cogentrix Proposed Electric Generating Facility Description.
4		(7) Prefiled Testimony of Kevin Clark, DHEC Bureau of Air Quality.
5		(8) Prefiled Testimony of Marion Sadler, DHEC Bureau of Water.
6	Q.	ARE YOU FAMILIAR WITH THE $\mathrm{NO_x}$ EMISSIONS CONTROLS
7		PROPOSED FOR THE GREENVILLE COUNTY POWER PLANT?
8	Α.	Yes. Greenville County Power plans to use GE turbines which operate
9		most of the time on natural gas. Greenville County Power is allowed to
10		burn fuel oil for no more than 30 days per year, and only from December
11		15 to February 15, which is not during the ozone season. The turbines will
12		use dry low NO _x technology and selective catalytic reduction (SCR) when
13		firing natural gas, and wet injection and SCR when firing fuel oil. This
14		combination of technologies will actually result in emissions, which are
15		better than "Best Available Control Technology."
16	Q.	WHY ARE THESE CONTROLS REQUIRED?
17	A.	South Carolina is currently in attainment with all of the National Ambient
18		Air Quality Standards (NAAQS). As such, South Carolina has a
19		maintenance plan that dates back to the 1970s. Under this plan, any new
20		source must comply with "Prevention of Significant Deterioration"
21		regulations for any NAAQS pollutants which it will emit above a certain
22		threshold. For NO _x , Prevention of Significant Deterioration regulations

1		require the use of Best Available Control Technology, which Greenville
2		County Power will meet or exceed.
3	Q.	DOES MEETING BEST AVAILABLE CONTROL TECHNOLOGY
4		ALLOW GREENVILLE COUNTY POWER TO COMPLY WITH
5		CURRENT REGULATIONS?
6	A.	Yes. Under current regulations, a facility that demonstrates that it meets
7		applicable State Implementation Plan (SIP) requirements; does not exceed
8		the applicable national ambient air quality standards (NAAQS); for
9		Prevention of Significant Deterioration (PSD) installs Best Available
10		Control Technology for criteria pollutants; does not exceed applicable PSD
11		air quality growth increments for the immediate class II area and the more
12		distant class I areas including related air quality related valued (AQRV's);
13		and has minimal impact on visibility in Class I, areas will be issued a
14		permit.
15	Q.	WHAT, THEN, IS THE QUESTION ABOUT NO $_{\rm x}$ EMISSIONS?
16	A.	The question is about what may happen in the future. That question exists,
17		incidentally, with regard to any emission source already in the upstate or
18		that may wish to build or expand in the upstate in the foreseeable future.
19		South Carolina has two related future NO_x issues. The first is compliance
20		with a regulation that has been approved by EPA and is expected to be
21		effective next summer. In response to EPA requirements, South Carolina
22		recently promulgated Regulation 61-62.99, which imposes NO _x reduction

	requirements on electric generating units, large industrial boilers, and
	cement kilns. As a result of Regulation 61-62.99, older sources with high
	NO_{x} emissions will be required to make significant reductions, although
	in many cases, they still will not meet the technology standard that
	Greenville County Power will meet. Regulation 61-62.99, when it goes
	into effect in 2002, includes allowances for new growth in NO_x emissions.
	The second issue relates to possible future non-attainment in several
	counties in South Carolina, including the Upstate counties along the I-85
	corridor.
Q.	WHAT DO YOU MEAN BY POSSIBLE FUTURE NON-
	ATTAINMENT?
A.	The United States Environmental Protection Agency classifies areas of the
	country as either "in attainment" or "in non-attainment" for various
	pollutants, including ozone. All of South Carolina is currently in
	attainment with all National Ambient Air Quality Standards, including the
	standard for ozone. However, EPA has proposed a new 8-hour standard for
	ozone. The proposed standard has been challenged in court, and a
	resolution of the court challenge is expected next year.
Q.	IF THE COURT UPHOLDS THE STANDARD, WHEN WILL NON-
	ATTAINMENT DESIGNATIONS BE MADE?
A.	EPA will likely make non-attainment designations in 2003, 2004, or 2005.
	A. Q.

Right now, EPA is in the process of revising its guidance for implementing

22

1		the ozone standard and expects to propose a regulation in the summer of
2		2002. Sometime after that regulation is finalized, a process that typically
3		takes at least one and frequently two years, EPA will make a formal
4		designation of areas that are in non-attainment.
5	Q.	WILL THE UPSTATE OF SOUTH CAROLINA BE IN NON-
6		ATTAINMENT FOR OZONE UNDER THE PROPOSED NEW 8-
7		HOUR STANDARD?
8	A.	If the proposed standard went into effect right now, the Upstate would be
9		in non-attainment. It is harder to predict whether the Upstate will be in
10		non-attainment if and when the 8-hour standard is actually in place. We
11		have not yet seen what emissions reductions will be achieved through
12		implementation of Regulation 61-62.99; federal standards for mobile diesel
13		and gasoline engines; and proposed clean fuels. EPA has said publicly that
14		it expects regulations similar to the one South Carolina enacted this
15		summer, combined with ongoing programs, to enable states to meet the 8-
16		hour standard. However, it is possible that EPA is wrong and that further
17		emissions reductions will be required to meet the new standard.
18	Q.	WHAT HAPPENS IF THE UPSTATE IS DESIGNATED NON-
19		ATTAINMENT?
20	A.	Once an area is designated as non-attainment, EPA requires the state to
21		revise its State Implementation Plan (SIP) to demonstrate how the state will
22		get that area back into attainment. This is known as a NO _x SIP call, and

1		it is the same mechanism that prompted the Regulation (61-62.99) that is
2		expected to become effective next summer. A state typically is allowed 18
3		months to two years to prepare a SIP revision and submit it to EPA for
4		approval. After EPA approves the SIP revision, the State has three years
5		to implement it.
6	Q.	SO IF THE UPSTATE IS DETERMINED TO BE IN NON-
7		ATTAINMENT, HOW LONG WILL IT TAKE BEFORE CONTROLS
8		ARE REQUIRED?
9	A.	Based on my experience, about it will take about 3 years to develop and
10		have a SIP revision approved containing an implementation plan phased
11		over two to three years.
12	Q.	WHAT KINDS OF CONTROLS MIGHT BE EXPECTED?
13	Α.	That would depend on the severity of non-attainment. Any new stationary
14		sources would be required to install lowest achievable emission rate
15		(LAER) technology and obtain offsets for an increase in emissions.
16		Existing sources could be assigned a reduction target for volatile organics
17		(VOC's) and NOx. Mobile sources could trigger a requirement for
18	·	designer fuels and inspection and maintenance (I&M).
19	Q.	WHAT ABOUT NOT ALLOWING NEW CONSTRUCTION OF NO_{x}
20		SOURCES AT ALL?
21	Α.	Although that is theoretically possible, it is highly unlikely because it is so
22		politically difficult. What is more likely is that emissions offsets for new

NO _x sources will be required.	That is what has happened in cities like
Houston, Atlanta, and Los Ange	eles, which have been in non-attainment for
a number of years.

21

22

A.

Q. ARE YOU AWARE OF OTHER PROPOSALS TO DEAL WITH POTENTIAL NON-ATTAINMENT?

Yes. Market based trading for SO2 and VOC emissions has been operating for a number of years. Many states have been operating emission banking programs for a number of years. The commodities market for NOx is newer, but functioning. There has been a NOx budget program for 12 states in the Northeast since 1999. Congress is currently debating a multipollutant bill, which would establish a market-based cap and trade program similar to the trading program for acid rain. A trading program was also set up under Regulation 61-62.99. Generally speaking, these programs establish a maximum level of emissions for an area, assign allocations to specific sources and set up a market in which industries can buy and sell emissions "credits." A company with older, high-emitting units might continue to run those units, or it might purchase control equipment, reduce its emissions, and sell the credits to another company. A new industry locating in the area would be able to purchase credits and build its facility without increasing the overall level of emissions. As we have seen in the acid rain area, a market-based trading program tends to drive new technology, because the ability to sell credits makes installation of controls

1		more e	economi	cally advantage	eous.			
2	Q.	ARE	YOU	FAMILIAR	WITH	THE	MODELING	EFFORT
3		CURI	RENTL	Y UNDERWA	Y AT DE	EC?		
4	A.	At this	s point,	no. I have mad	le an inqu	iry to D	HEC and its rep	resentatives
5		have a	igreed to	o discuss the m	atter with	me who	en they are read	у.
6	Q.	WHA	т аво	UT PARTICU	LATE M	ATTE	R EMISSIONS	?
7	A.	The ti	iming fo	or any particul	ate matte	revisio	ons is even fart	her into the
8		future	than oz	zone. The curr	ent regula	tory eff	ort is to establis	h a standard
9		for PN	√12.5, oi	r very fine parti	culates.	There is	an ongoing cou	rt challenge,
10		and E	PA is s	till assembling	support d	ata to d	efend its propos	ed standard.
11		The f	irst non-	-attainment desi	ignations	are not	expected until 20	004 or 2005,
12		which	n means	the standard	will not	be imp	lemented until	about 2010.
13		Unlik	e ozone	, implementatio	n of the pa	articulat	e matter standar	d is presently
14		target	ted to fo	cus on specific	contribut	ing sou	rces in non-attai	nment areas.
15	Q.	WHA	AT EFF	ECT SHOULI	POSSIE	LE FU	TURE CHANG	ES IN THE
16		REG	ULATI	ONS HAVE C	N THIS	PERMI	IT?	
17	A.	Based	d on my	y experience, n	one. I h	ave bee	n involved in C	lean Air Act
18		imple	ementati	ion since the Ac	ct first pas	sed in 1	1970, and the or	ne constant in
19		the A	ct has l	een change. In	n issuing j	permits,	agencies must	apply the law
20		as it	exists.	That is a reaso	nable requ	iiremen	t, because altho	ugh we know
21		thing	gs will	change in the	future, w	e have	been less than	successful at
22		pred	icting h	ow that chang	e will oc	cur. F	Present law pro	vides for the
								TWD-9

1		issuance of air permits to facilities that install the best available technolog
2		and meet anti-degradation PSD requirements. The Greenville Count
3		Power facility goes beyond that.
4	Q.	DOES THIS CONCLUDE YOUR TESTIMONY?
5′	A.	Yes.
_		

1 ě,

Thomas Devine P.E.*, QEP Senior Consultant and Principal

EXPERIENCE

GENERAL:

35+ years of multi-media experience in the environmental field

20 years with regulatory responsibility for permits, standards, enforcement and planning related management responsibility for professional/technical staffs up to 225 employees.

Includes: Hazardous waste, solid waste, Superfund, air, pesticides, toxics, radiation, noise, surface water, ground water, and drinking water

1999-date

Kestrel Management Services, LLC, Principal

Considers the broad range of interrelated environmental requirements and their impact on production systems, product design and marketing in developing recommendations for permits, compliance and environmental management systems. Brings multi-media experience (CAA, RCRA, CERCLA, CWA, FIFRA & TSCA), a knowledge of health and safety requirements, and broad exposure to the realities of manufacturing processes as actually applied to bear in evaluating options to address defined needs.

Also serves as an expert in administrative, civil and criminal actions in areas of expertise.

1988-1999

RMT, Vice President, Corporate Regulatory Affairs

Worked with clients to develop defensible (regulation, statute, policy), cost effective, strategic solutions to problems considering issues related to competitiveness and industry's production needs. This included securing permits and solving compliance-related issues associated with the CAA and RCRA, and the full spectrum of issues associated with Superfund and Corrective Action. Provides multi-media issue expertise as part of environmental integration into industry's strategic and master planning process.

1986-1988

Director, Office of Program Management and Technology, Office of Solid Waste and Emergency Response, EPA, Washington, D.C.

Consulted with OMB, the U.S. Congress and other federal agencies on developing policy and regulations.

Developed and managed, in conjunction with EPA ORD, the SITE Program and its related components.

Responsible for review of developing regulations that impacted on, or were impacted by, hazardous waste related statutes; information management; a national training and technology transfer program; and technology development and review related to hazardous waste management.

1984-1986 Director, Waste Management Division, Region 4 EPA, Atlanta, Georgia

1978-1984 Director, Air and Waste Management Division, Region 4 EPA, Atlanta, Georgia

Managed the air, RCRA, solid waste, Superfund, radiation, pesticides and toxics programs in the eight southeastern states. Responsible for permit issuance and compliance programs; implementation of emergency response, removal and remedial actions under Superfund and The Clean Water Act, and involvement with the political and regulatory process at the state and federal level, including testimony before state legislatures and the US Congress.

1974-1978 Chief, Air Branch, Air and Hazardous Waste Division, Region 1 EPA, Boston, Massachusetts

1971-1974 Chief, Technical Operations Section, Enforcement Branch, Region 1 EPA, Boston, Massachusetts

1968-1971 Chief, Industrial Waste Section, Surveillance and Analysis Division, Region 1 FWPCA, Boston, Massachusetts

1964-1968 Engineering positions with the International Joint Commission, Camp,
Dresser and McKee, and the Commonwealth of Massachusetts

Experience during this time encompassed various aspects of The Clean Water Act, including industrial waste evaluation; the Clean Air Act, including control strategy development (SIP), modeling and permitting; emergency response, including serving as an on-scene commander; and fairly extensive environmental planning and regulatory responsibilities.

HIGHLIGHTS

Hazardous Waste:

• Development of regulations/guidance for implementation of RCRA/Superfund statutory mandates.

- Development of training and technology transfer programs.
- Promote, assist and review new technology development in the hazardous waste field.
- National Program budget formulation.
- Served as expert witness in civil and criminal actions.
- Operating and strategic plan development and implementation for RCRA and Superfund in Region IV
- Management of integrated RCRA permit development staff including permit review and negotiation.
- Management of compliance inspection program. Responsible for subsequent enforcement decisions.
- Responsible for all activities (PA/SI, HRS, RI/FS, RD/RA) in the Superfund process for both removal and remedial.
- Management of the emergency response program.
- Implemented and participated in community relations programs, public meetings and formal hearings.

Air & Water:

- Use and interpretation of results from remote sensing systems, including airborne platforms.
- Selection, operation and interpretation of air and water quality models.
- Air pollution control systems evaluation.
- Developed air quality monitoring instrumentation.
- Designed and operated comprehensive air quality surveys, interpreting results and preparing reports.
- Served as an Agency expert witness for civil actions.
- Carried out comprehensive compliance inspections and developed appropriate enforcement cases.
- Evaluation of water and air permit conditions and their applicability.

- Management of Air Permit Staff and Comprehensive Planning Program.
- Conduct of industrial waste surveys, data analyses and recommendation for corrective action.
- Functioned as an On-Scene Commander.
- Field activities associated with the conduct of comprehensive water quality surveys, data analyses, remedial action recommendations and report preparation.
- Development of Water Quality Standards criteria and statewide classification for surface waters in the Commonwealth of Massachusetts.
- Assessment of water supply needs and alternatives analyses.

General:

- Project management throughout career.
- Extensive public speaking experience in varied forums and media dealing with general subject matter to complex technical issues.
- Facilitator in a variety of forums encompassing diverse subjects.
- Interaction with federal, state and local elected officials, and related committees including formal testimony.
- Experience as a negotiator.
- Served as arbitrator in environmental issue related arbitration.
- Management responsibility for successful delegation and authorization programs in the northeast and southeast.
- Worked in all regulated environmental media, with many state regulatory programs throughout the United States, and with industry, regulated utilities, and municipal government.
